AmaTerra Technical Report No. 90

City of Austin Historic Cemetery Master Plan Tree Survey

Geodatabase Reference Report

OVERVIEW

During the spring and summer of 2014 (May 5 – June 4, 2014), AmaTerra Environmental, Inc. (AmaTerra) staff and Davey Tree Professionals (Davey; collectively the Team) International Society of Arborists (ISA) certified arborists conducted a tree inventory survey of portions of Austin Memorial Park, Evergreen, Oakwood, Oakwood Annex, and Plummers Cemeteries as part of the City of Austin’s Master Plan development effort for these five historic cemeteries. The tree survey is a primary step in the collection of information that will be used to develop a master plan, which will include recommendations related to historic preservation, tree care, and cemetery management issues. The development of the master plan will be the first planning effort for the city’s five historic municipal cemeteries.

Under this tree inventory effort, the Team identified and assessed the condition of all trees, large shrubs, snags (standing dead trees), and stumps within all open portions (157.1 acres) of each of the cemeteries as well as approximately half of the densely wooded areas that are found along the properties’ peripheries (9 acres; 166.1 acres survey area total). A tabular summary of the acreages assessed is provided below while aerial photograph maps of each of the survey tracts is provided as Appendix A.

Table 1. Tabular summary of acreages evaluated within each of the five historic cemeteries.

Cemetery	Open Acreage	Dense Acreage	Dense Survey Acreage	Total Tree Survey Area	Total Cemetery Acreage
Austin Memorial	74.4	5.6	3	77.4	80
Evergreen	21.4	8.4	4	25.4	29.8
Oakwood	39.3	0	0	39.3	39.3
Oakwood Annex	18.6	0	0	18.6	18.6
Plummers	3.4	3.8	2	5.4	7.2
Total	157.1	17.8	9	166.1	174.9

FIELD CREW

All field investigations were directed by the project’s principal investigator, Elena Pinto-Torres. Additionally an ISA certified arborist, Octavio Perez, was also present at all times during the course of survey. Additional field crew included Bruce Darnell, Noel Steinle, William Carr, and Isai Nino-Escovar.

METHODS

Two teams of two members each from AmaTerra and Davey began surveying on May 5, 2014. Each team used a handheld Trimble GeoXH GPS data logger to collect pertinent data, which are described in detail in Appendix A of this report. The Trimble GeoXH units record positional data to submeter (<3 feet) accuracy with the majority of records collected at an accuracy of less than eighteen inches (30 centimeters). Approximately 5,685 trees, shrubs, snags, and stumps were logged in all over a period of four weeks, including trees in both open areas and wooded areas bordering the cemeteries.

Using a DBH tape to measure tree diameter

MEASUREMENTS

Each crew used special tree diameter measuring tapes to record the diameter at breast height (dbh) of trees and regular measuring tapes to record the diameter of stumps. In open areas, all trees and stumps were measured and recorded, while in the wooded areas, only trees of 8 inches dbh and above were measured and recorded.

Looking for clues to a tree’s structural integrity and health

OBSERVATIONS RECORDED

Each tree was observed for evidence of structural problems or disease and general tree health was noted, along with details such as diameter and number of dead branches, decay, and damage. Additional information such as species, proximity to overhead wires, parcel site type and access was also recorded. The survey teams worked closely with staff of the COA-Urban Forestry Department to be sure they were recording the most pertinent information in a manner that could be easily accessed and utilized by city foresters and land managers. Trees that could pose an immediate hazard were reported to the City of Austin Urban Forestry Department within 24 hours of their detection so that the City’s forestry staff would be able to take action as soon as possible.

Hammering a tag into a tree trunk

TAGS

Numbered aluminum tags are used in surveys to identify and maintain records of trees. During the survey, if a tree already had a tag, the tag number was recorded; if not, a new tag was attached to the main trunk with an aluminum nail and new tag number recorded with a Trimble data logger. Trees too small to be tagged and those which might be damaged by tagging were recorded but not tagged.

APPENDIX A – TREE SURVEY FIELD MAPS (ALL OPEN AREAS SURVEYED AND ALL AREAS IN RED IN WOODED AREAS SURVEYED)

APPENDIX B FIELD DATA ATTRIBUTED GUIDANCE

Description of CoA Urban Forestry Program’s Tree Inventory Attribute Fields

City of Austin Cemetery Master Plan

Prepared by Alan Halter

April 28, 2014

Instructions for use with Pathfinder, Trimble, and COA_Cemetery_Trees.ddf Pathfinder data dictionary file.

The following describes the attribute fields provided to AmaTerra from the City of Austin’s Urban Forestry Program for the purpose of fulfilling the tree inventory portion of the cemetery contract. Attribute fields are listed below with descriptions of their meaning. Attributes can be found in the COA_Cemetery_Trees.ddf Pathfinder data dictionary provided by the Urban Forestry Program. See references for more information.

- **Parcel Site Type**
 - Description: Refers to where the tree is located in the landscape.
 - Note: Choose the option that best describes the tree’s location and input the most specific site attribute. For instance, a tree may be growing on a median in a parking lot. The correct input would be median.
 - Default: Open Area
 - Open area: Open space, typically within a park or cemetery, without much heavy vegetation
 - Facility: Facility structure
 - Not applicable: Not applicable
 - Cutout: Refers to right-of-way trees with tree root growth restricted on all four sides by hardscape
 - Front yard: Residential front yard
 - Median: A right-of-way dividing area usually between opposing lanes of traffic or within parking lots. Should have pavement on either side.

- Other maintained: If the site does not fit any of the other attribute values, but it is clearly a maintained area. Maintained areas are typically areas that may be mowed.
- Other unmaintained: If the site does not fit any of the other attribute values, but it is clearly an unmaintained area. Unmaintained areas are typically natural areas with heavy vegetation.
- Parking: Parking lot or parking facility
- Planting strip: Street tree planting strip usually along a street curb
- **Overhead Utility**
 - Description: Presence of absence of overhead utility lines within 10 feet of any portion of the tree.
 - Default: No
- **Species**
 - Description: Common species name of trees.
 - Note: Notice there are options for unknown, dead, and stump. These inputs should be used accordingly. If a tree species is not listed in the species picklist, assign it as “Unknown” and type the correct species name in the comments field.
- **DBH**
 - Description: Diameter at breast height of a tree trunk measured in inches 4.5 feet above grade.
 - Use the following protocols for special measurement situations:
 - Leaning trunk: Measure 4.5 feet from the top and bottom side of the tree trunk. DBH should be measured midway between these points.
 - Multi-stem trunk: Measure DBH of the largest trunk at 4.5 feet, then add half the DBH of each additional trunk.
 - Trunk spilt: For a tree that splits at or just below 4.5 feet, measure DBH just below the split.

- Tree on a slope: Measure 4.5 feet along the high and low sides of the tree trunk. DBH will be midway between these two points.
- **Multi Stem**
 - Description: Denotes whether a tree trunk is multi-stem or not.
 - Default: No
- **Vigor Class**
 - Description: Describes the health condition of the tree in terms of vigor/function.
 - Default: Fair
 - Good: No apparent functional problems. May have only minor aesthetic insect, or disease problems, yet is in overall good health.
 - Fair: Minor problems which may include minor crown imbalance or thin crown, topped trees with reasonable vitality and show no obvious signs of decay.
 - Poor: Major problems or dying tree. May have severe crown dieback and poor vigor threatening its ability to survive.
 - Dead: Refers to dead trees only. If a tree is dying, the appropriate designation would be poor.
- **Structure Class**
 - Description: Describes the health condition of the tree in terms of structure/stability.
 - Default: Fair
 - Good: No apparent problems
 - Fair: Minor problems such as mechanical damage, significant damage from non-fatal or disfiguring diseases, or stunted growth compared to adjacent trees or shrubs.
 - Poor: Major problems or dying tree. Tree appears unhealthy and may have structural defects like co-dominant stems, severe included bark, or severe trunk and/or limb decay. A tree in this

category may also have severe mechanical damage threatening its ability to thrive.

- Dead: Refers to dead trees only. If a tree is dying, the appropriate designation would be poor.

- **Observations**

- Description: A remark on any tree issues observed.
- Note: There will likely be more than one issue for a tree, so choose the most limiting issue. For instance, a tree may have a small amount of dead wood but a large amount of decay. The input for the example would be decay.
- Default: None
 - Dead wood: Refers to a tree or branches of a tree that are dead, dying, or diseased
 - Decay: An area of wood that is undergoing decomposition (indicators: rotten wood, fungal fruiting bodies, cavities, holes, open cracks, bulges in wood)
 - Lean: Angle of the trunk
 - Poor architecture: Growth pattern indicates structural imbalance or weakness in the branch, stem, or tree.
 - Previous failure: Sign of previous breakage of stem, branch, or roots
 - Root problems: Inadequate anchoring by the root system, damaged roots, or stem girdling roots

- **Further inspection**

- Description: Denotes whether or not further inspection is needed by an ISA Certified Arborist.
- Default: No

- **Tree Tag Number**

- Description: The tree tag number nailed to a tree.

- Note: Numbers should fall within the number series purchased by AmaTerra.
- **Access**
 - Description: Describes the ease in accessing a tree site for workers and vehicles.
 - Note: This attribute should be assessed individually for each tree as access to sites may change across a single property.
 - Default: Limited. Many areas of a cemetery do not have access roads.
 - Open: Large trucks can easily access the tree
 - Limited: Gates, fences, or structures may impede access
 - Foot access only: Site can only be accessed on foot
- **Created Date**
 - Description: The date the GPS tree point was initially created.
 - Note: The format should be MM/DD/YYYY.
 - Default: The Pathfinder data dictionary is set up to auto-generate this field. The user should not have to input this attribute.
- **Created By**
 - Description: Name of the user that created the data, using first initial and last name.
 - Default: Contractor
- **Comments**
 - Description: A text field for any additional comments about the GPS data point.
 - Default: None

- Note: There will likely be more than one issue for a tree, so choose the most limiting issue. For instance, a tree may have a small amount of dead wood but a large amount of decay. The input for the example would be decay.
- Default: None
 - Dead wood: Refers to a tree or branches of a tree that are dead, dying, or diseased
 - Decay: An area of wood that is undergoing decomposition (indicators: rotten wood, fungal fruiting bodies, cavities, holes, open cracks, bulges in wood)
 - Lean: Angle of the trunk
 - Poor architecture: Growth pattern indicates structural imbalance or weakness in the branch, stem, or tree.
 - Previous failure: Sign of previous breakage of stem, branch, or roots
 - Root problems: Inadequate anchoring by the root system, damaged roots, or stem girdling roots

- **Further inspection**

- Description: Denotes whether or not further inspection is needed by an ISA Certified Arborist.
- Default: No

- **Tree Tag Number**

- Description: The tree tag number nailed to a tree.
- Note: Numbers should fall within the number series purchased by AmaTerra.

- **Maintenance Priority**

- Description: Priority level for maintenance to be conducted on a tree.
- Note: It is unlikely that “small tree immediate” will be used
 - Critical concern: Emergency status
 - Immediate: High priority
 - Routine: Routine maintenance
 - Large tree: A tall tree, typically >15 feet, that requires a bucket truck or climbing equipment to conduct maintenance
 - Small tree: A small tree, typically <15 feet, that can be worked on from the ground

- **Maintenance Task**

- Description: The tree maintenance duty assigned to a tree. Choose the most immediate task.
 - Plant: Plant a new tree at the site
 - Reduce: Pruning to decrease height and/or spread of a branch of crown
 - Remove: Removal of entire tree

- Remove stake: Remove support stakes. Mostly pertains to young trees.
 - Remove trunk guard: Remove trunk guard/protector. Mostly pertains to young trees.
 - Remove hardware: Remove any other tree hardware.
 - Crown clean: In pruning, the selective removal of dead, dying, diseased, and broken branches from the tree crown
 - Raise: Selective pruning to provide vertical clearance
 - Install stakes: Installment of tree stakes for structural support. Mostly pertains to young trees.
 - Structural pruning: Pruning to establish a strong arrangement or system of scaffold branches. Mostly pertains to young trees.
 - Inspect: Examination needed by ISA Certified Arborist
- **Access**
 - Description: Describes the ease in accessing a tree site for workers and vehicles.
 - Note: This attribute should be assessed individually for each tree as access to sites may change across a single property.
 - Default: Limited. Many areas of a cemetery do not have access roads.
 - Open: Large trucks can easily access the tree
 - Limited: Gates, fences, or structures may impede access
 - Foot access only: Site can only be accessed on foot
- **Created Date**
 - Description: The date the GPS tree point was initially created.
 - Note: The format should be MM/DD/YYYY.

- Default: The Pathfinder data dictionary is set up to auto-generate this field. The user should not have to input this attribute.
- **Created By**
 - Description: Name of the user that created the data, using first initial and last name.
 - Default: Contractor
- **Comments**
 - Description: A text field for any additional comments about the GPS data point.
 - Default: None
